Field of the Invention The present invention relates to drug delivery devices, particularly to implants which may be located subcutaneously or intramuscularly and that provide a sustained release of drugs over a sustained period of time to achieve therapeutic concentrations of drugs in body fluids. The implants of the invention may optionally be designed to release drugs in a pulsatile manner, or they may be used for the sustained delivery of drugs with possible pulsatile release. The implants of the invention may be placed in animals, including humans, that may be suffering from diseases such as cardiovascular diseases, pain, inflammation, or other conditions that require the delivery of a drug. Further, the present invention relates to a bioabsorbable implant having a coating which may either be non-immunogenic or may be pharmacologically active and which may be designed to release drugs over a sustained period of time. 2. Description of Related Art For patients that are able to afford them, certain drugs are prescribed that are available in various forms such as pills, liquid, syrups, oral solutions, tablets, or by injection. However, not all drugs are available in such a form and/or at least not in a form that is immediately available at the site of therapy. For example, some drugs are available as liquids and therefore are not suitable for oral delivery. Other drugs cannot be delivered in a sustained manner due to their chemical instability. Moreover, some drugs are not suitable for injection and, for certain other drugs, injection involves some risk to the patient. In an effort to deliver drugs to a specific area of the body, a variety of routes of administration have been developed. Some of these routes of administration are by-passing the gastrointestinal system and delivering drugs to the bloodstream and then to the target site. One of the more common routes of administration is to inject the drug directly into the bloodstream. This method of delivery is often undesirable due to the risk of infection and/or other problems associated with injections. 6a5afdab4c

### What's New in the Another CPU Meter?

A CPU load meter widget for Desktop Widget Engine. Shows the load of your system CPU in % of all the available free processors. Ideal for tucking away in a corner, or for the home user to check what their system is doing. It's so easy to use, just right-click (or the equivalent) on your desktop and the widget will appear, on the right side of your desktop. Move it to a more suitable location and leave it there. If you need to use other widgets, just right-click on the widget and drag it to where you wish. Please note that this widget is not supported on Windows 2000, Windows 98 or Windows Me. Another CPU Meter Publisher's Description: Another CPU Meter - a load meter widget for the Yahoo Desktop Widget Engine, ideal for the home user to check what their system is doing. It shows your system load, based on the percentage of all the available processors in your system. The widget is very simple and has no options, just drop it where you want it to appear and you are good to go. Installing on Windows 98, ME or 2000 is not a problem. It also works under Windows NT. When the widget is displayed, you can use your mouse to move around the screen. You can also close or minimize the widget by clicking on the widget icon in the taskbar. Other Features The widget can be tiled on the desktop. Tiling reduces its area, so it can be easily moved to a corner of the desktop.
